

Appointment Booking Voice AI Agent – Workflow Overview

This automation is designed to enable seamless **voice-based appointment booking** using AI agents, calendar integrations, and natural language understanding. It listens to incoming requests, checks availability, and automates the full booking process across tools like Gmail, Google Calendar, and AI models.

Workflow Breakdown:

1. **Webhook Trigger**
Starts the workflow when a voice request or form submission is received via webhook.
 2. **Split Out & Aggregate**
Extracts and aggregates relevant information from the message payload to prepare it for processing.
 3. **Last 10 Messages**
Gathers the last 10 interactions/messages to provide context for the AI agent.
 4. **Check Availability (Tools Agent)**
Checks if a time slot is available using internal logic or connected scheduling tools.
 5. **Decision Branch (If Available)**
Based on availability, the workflow branches:
 - If available → proceeds to booking.
 - If not available → triggers alternative logic.
-

Available Branch:

6. **Create Booking (Tools Agent)**
Automatically books the appointment in the system or external tool.
 7. **OpenAI Chat Model (v2)**
Sends a confirmation or follow-up message using AI-generated responses.
 8. **Gmail – Send Email**
Notifies the user via email about the booking confirmation.
 9. **Google Calendar – Create Event**
Schedules the appointment on the integrated calendar system.
 10. **End Response**
Ends the workflow after successful confirmation and notifications.
-

Tools Used:

- **OpenAI GPT Models** – For natural conversation and dynamic message generation
- **Google Calendar** – For real-time scheduling and event creation
- **Gmail** – For communication with users
- **Custom Tools Agent** – For booking logic and availability checks
- **n8n** – Orchestration of all automation steps
